

WHAT IS HAMMERSPOON?

Hammerspoon is a productivity tool for Mac OS X that offers the following features:

- Window management (size, location, placement)
- Watchers - screen, applications, battery, filesystem, wifi, USB
- Hotkey support
- Mac style Notifications
- Definitions are written in Lua.. such power!

**SAVE YOURSELF TIME AND
FRICTION?**

DIFFERENT WINDOW LAYOUTS FOR THE OFFICE OR HOME, ON-THE-GO?

**SICK OF ORGANISING YOUR
APPLICATION WINDOWS 'BACK' TO
WHERE YOU WANT THEM?**

FEATURES

WATCHERS

WINDOW MANAGEMENT

HOTKEYS

LUA

WATCHERS

Create callback functions for events such as:

- A screen, USB device has been plugged in
- The connected WIFI SSID has changed
- An application has started up, minimised / hidden or activated
- A file / directory on disk has been updated

WINDOW MANAGEMENT

- Ensure applications are always in the same place
 - Manually using hotkeys
 - Automatically using 'layouts'
- Move and resize application windows using hotkeys

HOTKEYS

- Great for moving an resizing application windows
- Start a particular application / applications
- Bring a particular application to focus
 - + F focuses Flowdock for me
- Force a 'layout' refresh

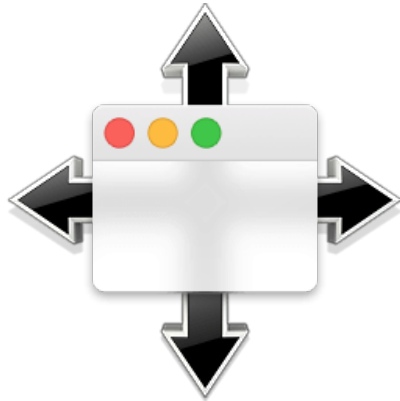

WRITTEN IN LUA

- Available APIs are many!
- Infinite possibilities for customisation!
- Hammerspoon user contributed library ecosystem?

PRACTICAL USES

- Bind hotkeys to move / resize application windows
- Using WIFI SSID and / or monitor identifier, set a 'work' or 'home' setup which:
 - Move / resize application windows exactly how you want
 - Set monitor brightness
 - Set audio volume
- Boss hotkey - minimises all non-work related applications and bring up hackertyper.net
